

Application to extend the emptying interval of a dry waste container to 16 weeks

According to the waste management regulations of South Karelia, the interval between emptying the dry waste container on a property can be 1, 2, 4, (6 in urban areas), 8, or 12 weeks. If the volume of dry waste to be removed from the property is exceptionally low, the emptying interval can be extended to 16 weeks with a deviation permit granted by the waste management authority.

The extension of the emptying interval is always reviewed on a case-by-case basis and is affected by, for example, the number of inhabitants on the property, the sorting of waste for recycling, and the size of the waste container. Personal handling of waste, such as incineration, taking place in violation of waste management regulations does not constitute grounds for granting an extension.
